

FEED MILL PRODUCTION INTERNSHIP

DeMotte, IN

Belstra Milling offers a summer program for students to learn about the feed manufacturing process while getting real world experience. Our goal is to teach students various steps that are entailed in the manufacturing of safe animal feeds, while allowing them to use knowledge learned in the classroom. Working as a team within our company our hope is that our interns take away not only a general knowledge of the feed industry, but useful contacts and relationships for the future. This is a compensated internship and Belstra Milling will provide housing to non-local candidates. Please direct all questions and applications to Karla Romo karlaromo@belstramilling.com. Applicants please provide a cover letter and resume when applying.
